## Porsche debuts the 2021 911 Targa 4 and 4S models

The design icon enters its eighth generation with more power and updated features

**Atlanta, Georgia.** Following the Coupe and Cabriolet, the third body style of the new 911 generation is now making its debut with the all-wheel drive 911 Targa 4 and 911 Targa 4S models. The innovative, fully automatic roof system remains its distinguishing feature, and just like the legendary original Targa model from 1965, it features a characteristic Targa bar, a retractable roof section above the front seats and a wraparound rear window. The roof can be automatically opened and closed in just 19 seconds at the touch of a button.

Both models are fitted with an eight-speed dual-clutch transmission (PDK) and intelligent all-wheel drive Porsche Traction Management (PTM) as standard to deliver compelling performance, traction and driving pleasure. Alternatively, the 911 Targa 4S can be ordered with a seven-speed manual transmission at no charge, which includes the Sport Chrono package as standard.

Both 911 Targa models are powered by a six-cylinder, three-liter twin-turbo boxer engine: the 911 Targa 4 now delivers 379 hp and accelerates from zero to 60 mph in just 4.0 seconds when equipped with PDK and the optional Sport Chrono Package – one tenth quicker than the previous model. The engine in the 911 Targa 4S puts out 443 hp and reaches the 60 mph mark in just 3.4 seconds with PDK and the optional Sport Chrono Package – four tenths quicker than its predecessor. The top track speed of the new 911 Targa 4 is 179 mph, while the 4S peaks at 188 mph.

Like on the 911 Carrera models, Porsche InnoDrive, which includes adaptive cruise control, is optionally available on PDK-equipped models for the first time. And thanks to the enhanced Smartlift function for the optional front axle lift system, frequently visited locations can be programmed so that the front end of the car is raised automatically when needed. The thorough array of options is supplemented by an extensive range of accessories from Porsche Tequipment and new personalization options from Porsche Exclusive Manufaktur. Additionally, Porsche will expand the combination of traditional

styling elements, timeless design and cutting-edge technology in a special edition of the 911 Targa, which will make its debut in June.

### **Powerful twin-turbo boxer engines**

Like the 911 Carrera models, both 911 Targa variants profit from an increase in power compared to the previous generation of three-liter twin-turbo six-cylinder boxer engines. The engine in the 911 Targa 4 produces 379 hp at 6,500 rpm, which is nine hp more than its predecessor. Its maximum torque of 331 lb-ft is delivered across a wide engine speed range from 1,950 to 5,000 rpm. Making 443 hp, the 911 Targa 4S delivers 23 hp more than the previous model and generates 390 lb-ft of torque (22 more than before) between 2,300 and 5,000 rpm.

### **Optimized all-wheel drive for even better traction**

The enhanced performance of the new all-wheel drive models goes hand-in-hand with further development of the front-axle drive system that was already introduced in the 2020 911 Carrera 4 and 4S Coupe and Cabriolet models. The clutch and differential unit is water-cooled and has reinforced clutch discs for greater strength and a higher load capacity. The increased actuating torque at the clutch improves its adjustment accuracy and the function of the front-axle drive. Overall, the enhanced front-axle drive with Porsche Traction Management (PTM) contributes to even better traction in all road conditions.

### **Further developed chassis for increased comfort and sharper handling**

Like on all Porsche 911 Carrera models, the electronically-controlled variable damping Porsche Active Suspension Management (PASM) system is standard equipment on the new 911 Targa models. This system automatically adjusts the damping characteristics focused on maximizing driving comfort and handling to each driving situation, and has two modes that can be activated by the touch of a button: Normal and Sport. Porsche Torque Vectoring Plus (PTV Plus), which includes an electronic rear limited slip differential with fully variable torque distribution, is standard for the Targa 4S with PDK and is available as an option on the Targa 4. When ordered with the manual transmission,

the 911 Targa 4S comes fitted with a mechanical rear limited slip differential. Like the other eighth generation Porsche 911 variants, the Targa models are also equipped with Porsche Wet Mode as standard. Sensors fitted in the front wheel housings are capable of detecting water on the road surface and, if significant volumes of water are picked up, the stability control system is automatically optimized for wet conditions, and a message in the instrument cluster provides a recommendation for the driver to manually switch to Wet Mode. Once the driver does so, the powertrain is then adapted to the conditions to help improve traction and stability in adverse weather conditions.

Like the 379 hp 911 Carrera models, the 911 Targa 4 comes standard with 235/40 ZR tires on 19-inch alloy wheels in front and 295/35 ZR tires on 20-inch wheels in the rear. The 4S model is fitted as standard with 245/35 ZR tires on 20-inch front wheels and 305/30 ZR tires on 21-inch rears – this larger wheel combination is optional for the 911 Targa 4. On the Targa 4, the standard cast iron rotors measure 330 millimeters in diameter front and rear and use black four-piston monobloc fixed calipers. The red-painted brake calipers on the Targa 4S have six pistons at the front axle, four at the rear, while its rotors measure 350 mm front and rear. The Porsche Ceramic Composite Brake (PCCB) can be ordered as an option for both models.

### **Extravagant Targa design with a modern interpretation**

The most striking feature of the 911 Targa is of course its Targa bar and roof, which was adopted from the previous 991 generation model and optimized further. Harking back to classic Targa models of the 1960s and 1970s, the Targa bar comes standard in silver but can also be optionally ordered in black, and features the characteristic “Targa” model designation on each side, which has graced 911 Targa models since 1965. The roof construction consists of two flat magnesium elements, which hold the fabric roof in place securely and contribute to the elegant silhouette of the car. A heated glass rear window, sound-deadening material inside the fabric, as well as an extendable wind deflector integrated into the upper cowl frame of the windshield make the new 911 Targa comfortable and suitable for daily use.

**No. 34/20**

The exterior of the 911 Targa is characterized by the design elements of its 992-model generation. Compared to its predecessors, its body features significantly more pronounced wheel housings at the front and, between its LED headlights, its front luggage compartment lid has a distinctive recess evoking the design of earlier 911 generations. The rear is characterized by a wider, variably extending rear spoiler and a seamlessly integrated and elegant light bar. With the exception of the front and rear fasciae, the entire outer skin is made from aluminum.

The interior echoes the 911 Carrera models and is characterized by the clear and straight lines of its dashboard and its recessed instruments. The 911 models from the 1970s provided the inspiration here. Alongside the central tachometer – very much a defining feature for Porsche – two thin, frameless freeform displays offer key vehicle information for the driver. Five toggle switches providing direct access to important vehicle functions are located below the 10.9-inch center screen of the Porsche Communication Management (PCM). The standard PCM features include online navigation as well as Connect Plus (A subscription is required after an initial 12-month trial period).

### **The model for a new class of sports cars since 1965**

The 1965 911 Targa 2.0 was a trailblazer for a completely new type of car. Originally marketed as a "safety cabriolet with supplemental roll bar", the Targa, with its removable roof section, soon established itself as an independent concept and became a style icon. Right up to the present day, Porsche has continued to combine two worlds in the 911 Targa: the advantages of open-top driving in a cabriolet combined with the everyday comfort and interior feeling of a coupe.

### **Pricing and availability**

The new 2021 911 Targa models are available to order now and are expected to reach U.S. dealers in late 2020. MSRP is \$119,300 for the 2021 911 Targa 4 and \$135,200 for the 2021 911 Targa 4S, not including a \$1,350 delivery, processing and handling fee.

**About Porsche Cars North America, Inc. | One Porsche Drive, Atlanta, GA 30354 USA**

Established in 1984, Porsche Cars North America, Inc. (PCNA) is the exclusive U.S. importer of the Porsche 911, 718 Boxster and 718 Cayman; Macan and Cayenne; Panamera; and Taycan. Headquartered in Atlanta, Georgia, since 1998, PCNA is also home to the first Porsche Experience Center in North America featuring a module-based 1.6-mile driver development track, business center, and fine dining restaurant, 356. The company operates a second Porsche Experience Center near Los Angeles. That 53-acre complex features a driver development track with eight educational modules totaling 4.1 miles, a business center, and Restaurant 917. PCNA supports 192 independently owned and operated Porsche dealerships in the U.S., including supplying parts, service, marketing, and training. They, in turn, work to provide Porsche customers with a best-in-class experience that is in keeping with the Porsche brand's 70-year history of leadership in the advancement of vehicle performance, safety, and efficiency. PCNA is an indirect wholly-owned subsidiary of Porsche AG, which is headquartered in Stuttgart, Germany.

At the core of this success is Porsche's proud racing heritage that boasts some 30,000-plus motorsport wins to date.
